Part I.

About

KEYLE is a library that allows you to create HTML <kbd> like keyboard shorts simple and easy.

The name, keyle, is a combination of key and theme.

This project is inspired by <u>auth0/kbd</u> and <u>dogezen/badgery</u>. Send them respect!

Part II.

Usage

II.1. Importing

KEYLE is imported using

```
#import "@preview/keyle:0.1.0"
```

II.2. Quick Start

Generate a keyboard renderer with #config() function. Section Section III.1 lists available themes.

```
#let kbd = keyle.config()
#kbd("Ctrl", "Shift", "Alt", "Del")

#let kbd = keyle.config(
    theme: keyle.themes.biolinum,
    delim: keyle.biolinum-key.delim_plus
)

#kbd("Ctrl", "Shift", "Alt", "Del")

Ctrl + Shift + Alt + Del

Ctrl + \Del
```

There are compact and delim options to make the output more compact and change the delimiter between keys.

You can either use them in #config() function or directly in generated kbd function.

```
#let kbd = keyle.config(compact: true, delim: "-")
#kbd("Ctrl", "Shift", "Alt", "Del")
#let kbd = keyle.config()
#kbd("Ctrl", "Shift", "Alt", "Del", compact: true, delim: "-")

Ctrl-Shift-Alt-Del

Ctrl-Shift-Alt-Del
```

Part III.

Themes

III.1. Built-in Themes

Themes function are available at #keyle.themes dictionary.

```
#keyle.themes.standard Home

#keyle.themes.deep-blue

#keyle.themes.type-writer

#keyle.themes.biolinum

Home
```

III.2. Custom Themes

You can create your own theme by defining a function that takes a string and returns a themed content.

```
// https://www.radix-ui.com/themes/playground#kbd
  #let radix_kdb(content) = box(
     rect(
       inset: (x: 0.5em),
outset: (y:0.05em),
       stroke: rgb("#1c2024") + 0.3pt,
       radius: 0.35em,
       fill: rgb("#fcfcfd"),
       text(fill: black, font: (
         "Segoe UI (Custom)",
         "Roboto",
         "Helvetica Neue",
         "Open Sans (Custom)",
         "sans-serif",
         "Apple Color Emoji",
         "Segoe UI Emoji"
       ), content),
     ),
  #let kbd = keyle.config(theme: radix_kdb)
  #kbd("% D") #kbd("^î F")
       ^分 F
₩ D
```

Part IV.

Symbols

IV.1. Mac Keyboard Symbols

KEYLE provides symbols for Mac keyboard. You may need install Fira Code font to see the symbols correctly.

- Fira Code @ Google Fonts
- Apple Mac Keyboard Symbols

```
#let kbd = keyle.config(theme: keyle.themes.standard)
    #let mac-key-font = (
      "Fira Code",
      "FiraCode"
      "FiraCode Nerd Font Mono",
    #grid(
      columns: (2fr, 1fr, 2fr, 1fr),
      rows: 2em,
      align: horizon,
      ..keyle.mac-key.pairs().map(item => (
        raw("#keyle.mac-key." + item.at(0)),
          text(font: mac-key-font, item.at(1))
      ),
)).flatten()
#keyle.mac-key.command
                                         #keyle.mac-key.shift
#keyle.mac-key.option
                                         #keyle.mac-key.control
#keyle.mac-key.return
                                         #keyle.mac-key.delete
#keyle.mac-key.forward-
                            #keyle.mac-key.escape
delete
#keyle.mac-key.left
                                         #keyle.mac-key.right
#keyle.mac-key.up
                                         #keyle.mac-key.down
                            ‡
#keyle.mac-key.pageup
                                         #keyle.mac-key.pagedown
                            K
#keyle.mac-key.home
                                         #keyle.mac-key.end
#keyle.mac-key.tab-right
                                         #keyle.mac-key.tab-left
```

IV.2. Linux Biolinum Keyboard Symbols

KEYLE provides symbols for Linux Biolinum Keyboard font.

• Linux Biolinum Keyboard

```
#let kbd = keyle.config(theme: keyle.themes.biolinum)
    #grid(
      columns: (5fr, 3fr, 5fr, 3fr),
      rows: 2em,
      align: horizon,
      ..keyle.biolinum-key.pairs().map(item => (
        raw("#keyle.biolinum-key." + item.at(0)),
        kbd(item.at(1)),
      )).flatten()
    )
#keyle.biolinum-key.Strg
                                           #keyle.biolinum-key.Alt
                           Strg
                                                                      Alt
#keyle.biolinum-key.Ctrl
                                           #keyle.biolinum-key.Shift
                           Ctrl
#keyle.biolinum-key.Tab
                                           #keyle.biolinum-key.Enter ✓
#keyle.biolinum-
                                           #keyle.biolinum-key.Home
                           ₽
                                                                      Home
key.Capslock
#keyle.biolinum-key.Del
                                           #keyle.biolinum-key.Ins
                           Del
                                                                      Ins
#keyle.biolinum-key.End
                                           #keyle.biolinum-key.Space
                           End
                                           #keyle.biolinum-
#keyle.biolinum-key.Esc
                                                                       Page 1
                           Esc
                                           key.PageUp
#keyle.biolinum-
                                           #keyle.biolinum-key.Back
                           Page.
key.PageDown
                                           #keyle.biolinum-key.Pad_1 | Pad 1

```

Part V.

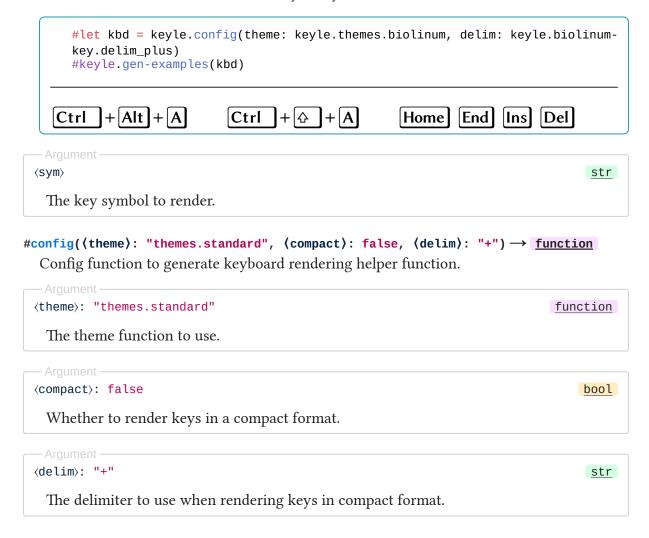

Available commands

```
#config()
                                #theme-func-deep-blue()
                                                              #theme-func-type-writer()
  #theme-func-biolinum()
                                #theme-func-stardard()
\#theme-func-stardard(\langle sym \rangle) \rightarrow \underline{content}
  Theme function to render keys in a standard style.
       #let kbd = keyle.config(theme: keyle.themes.standard)
       #keyle.gen-examples(kbd)
                              Ctrl+Shift+A
     Ctrl
             Alt |
                                                          End
                                                                      Del
                                                  Home
                                                                 Ins
 ⟨sym⟩
                                                                                        str
   The key symbol to render.
#theme-func-deep-blue(\langle sym \rangle) \rightarrow content
  Theme function to render keys in a deep blue style.
       #let kbd = keyle.config(theme: keyle.themes.deep-blue)
       #keyle.gen-examples(kbd)
                                CTRL+SHIFT+A
                                                       Home End
                                                                     Ins
                                                                           Del
     CTRL
                                                                                        str
 ⟨sym⟩
   The key symbol to render.
\#theme-func-type-writer(\langle sym \rangle) \rightarrow <u>content</u>
  Theme function to render keys in a type writer style.
       #let kbd = keyle.config(theme: keyle.themes.type-writer)
       #keyle.gen-examples(kbd)
           + (ALT) +
                                CTRL+SHIFT+A
                                                      HOME END INS DEL
     CTRL
                                                                                        str
 ⟨sym⟩
   The key symbol to render.
```

 $\#theme-func-biolinum(\langle sym \rangle) \rightarrow \underline{content}$

Theme function to render keys in a Linux Biolinum Keyboard style.

You need to have the font installed on your system.
